

More Product. More Service. More Value.

The time is right for wood.

Wood is our passion. Timber is a fascinating material which inspires us to develop energy-efficient products and solutions for healthy and economical construction. We are in favour of greater quality of life in tune with our environment.

Timber Concept speaks the language of wood and translates it into customer and application-orientated concepts.

The Timber Concept company represents holistic solutions in wood products and timber construction engineering. Our team is made up of experts who have broad, well-founded expertise and many years of experience in the international environment.

Competent, fast, flexible and reliable – customer service is a huge priority for us.

We listen, analyse the requirements of products and service-performance, and offer appropriate solutions.

We respond to demands from planners and architects for functional, economical buildings which hold their value with tailor-made concepts. We always think in project-specific contexts.

Our aim is always to create measurable benefits for our customers and suppliers at all levels along the value chain.

Measure us by the benefits you gain.

With over 25 years of experience in the industry, we are familiar with the international market, the services on offer and industry standards. We recognise developments early. Along with expertise, customers demand speed, flexibility and reliability.

We are independent. The product or conceptual solution chosen depends solely on the requirements of our customers.

Timber Concept offers a wide range of products, from standard products to special components and individually planned creative solutions. The services we offer also include professional consultancy and planning, tailored to the needs of our customers.

Everything from a single source – our customers have just one dedicated contact person, who will support you from your very first enquiry, through the calculation, preparation and job planning stages, all the way to the delivery of the project.

This prevents miscommunication and lost information while the order is being processed.

We maintain close cooperation with manufacturers, from whom we demand a single obligation: to find the best solutions for our customers. And because a solution is always a process, we support our customers all the way to the finishing line.

ADVANTAGES

The deal is perfect when everyone is happy.

Our areas of expertise include trading in timber, engineered timber products and wood fuels. Our focus is on classic glued timber products.

Timber only is not enough for us. That is why we also offer additional, environmentally-friendly products to maintain our structures, such as insulating materials, fasteners and surface treatments.

Before customers choose from our extensive range, we thoroughly discuss all aspects of the project. This allows us to work out the requirements they have for our products and services:

SOLID TIMBER:

- ✓ Solid timber beams and panels
- ✓ Fingerjointed structural timber (KVH)

ENGINEERED WOOD PRODUCTS:

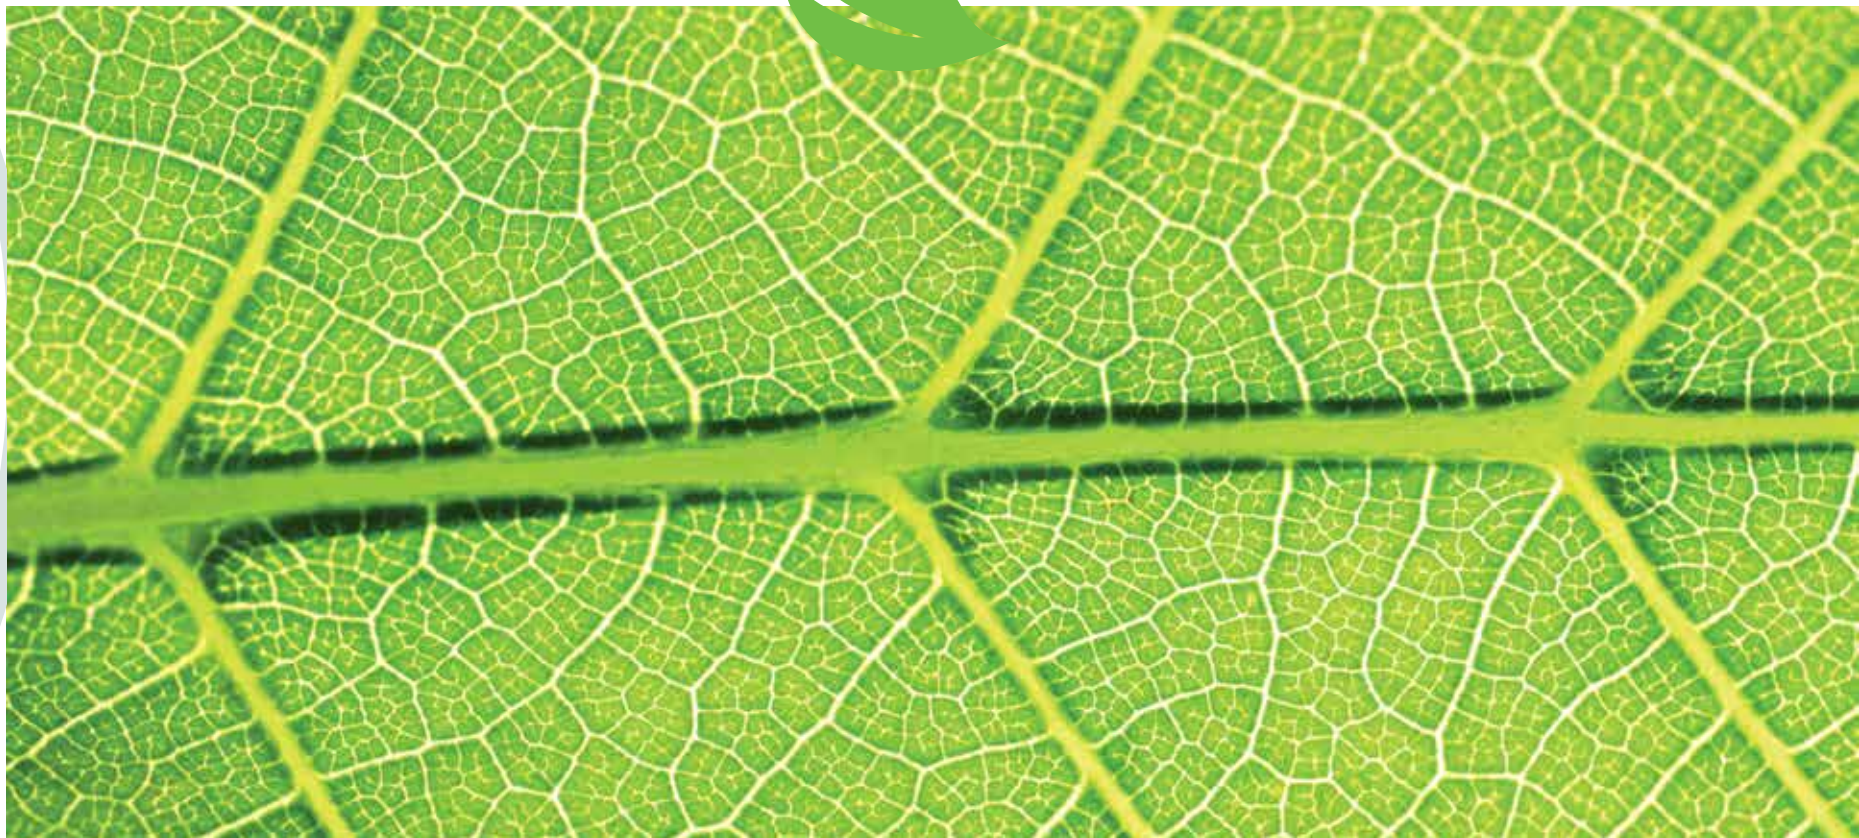

- ✓ Two and three ply solid timber beams (Duo, Trio beams)

- ✓ Glulam beams in spruce, pine, larch, Douglas fir, oak, beech, ash, chestnut
- ✓ Glulam beams in special shapes (arches, round columns)
- ✓ Profiled glulam beam components (for log homes, ceiling elements)
- ✓ Panel materials (structural panels, cross laminated timber, laminated veneer lumber)

CONNECTION PARTS, TOOLS, TIMBER CONSTRUCTION SUPPLIES:

- ✓ Steel components, fasteners and connecting parts
- ✓ Carpentry supplies, special tools for timber construction
- ✓ Insulation materials, sealing strips, films, surface treatment, stains

The solutions make us a profitable partner

The concept is what makes us stand out. With the combination of the product, service, experience and expertise, we have the perfect response to our customers' needs.

Timber Concept takes the customers' specifications into account. These might be requirements such as environmental compatibility or the quality of a component, or questions regarding the economic viability and lifespan of a product.

The delivery of ready-to-assemble components – one of our great strengths – requires precision planning and exact coordination between the planner, engineer, architect and production. Our technical expertise and our proximity to the production companies guarantee consistently high product quality in all timber construction solutions.

STRUCTURAL TIMBER COMPONENTS WITH SPECIAL GEOMETRIC SHAPES

Boomerang beams, arched beams, fish-bellied beams

COMPOSITE STRUCTURAL COMPONENTS

Block-laminations, heavy timber trusses, hybrid structures

TIMBER CONSTRUCTION SYSTEMS

X-Lam structures, log home construction, timber-glass facades, ribbed panels, box girder elements, ceiling elements

READY-TO-ASSEMBLE COMPONENTS

CNC or manual custom joinery, pre-mounted steel and connecting parts, surface treatments

We plan the future with wood.

We want our customers to benefit from our expertise in planning and consultancy, which is why we work so closely with them.

Our planning and consultancy do not have to be linked to a product.

We support our customers with sales concepts. We offer help with marketing and introducing technical, innovative timber materials.

These fields of activity are where our expertise comes into its own, opening up a broad spectrum of expert support for our customers:

PLANNING AND CONSULTANCY:

- Pre-dimensioning of components, structural calculations and engineering services

- Feasibility studies, planning and architectural services

- Construction and element planning, material optimisation

- Building assessments, audits, renovation concepts, surveying

- Energy-related consultancy and calculations

- Sales concepts of small and medium-sized manufacturers

- Compilation of technical product documentation

- Market launch of green technology products

- Support in technical approval processes

- Organisation of specialist educational trips, workshops and seminars

PLANNING

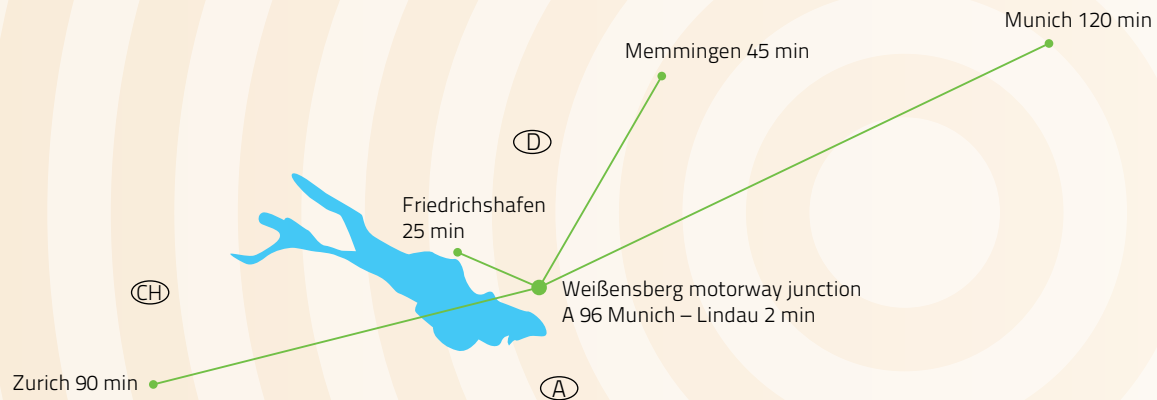

Our address? Close to the timber sources.

Lake Constance brings together three countries which play a leading role internationally in modern timber construction: Germany, Austria and Switzerland.

The Bregenzerwald region provides constant inspiration for innovative timber construction engineering. Switzerland has been leading the way in timber construction for centuries, and the

German states of Bavaria and Baden-Württemberg act as examples with their internationally-renowned timber construction architecture. What better place to settle and be inspired?

Our main office is in Weißenberg, near Lindau on Lake Constance; centrally located and easy to get to.

Competence is our strength in many forms.

Timber Concept brings together a great number of strengths. One is wood in all its forms as a sustainable construction material. Another is a motivated team with over 25 years of experience in the international environment.

The focus is always on our customers and our passion for Engineered Wood Products.
